PROFILE STATEMENT

Hi, I'm a software developer with 3 years of expertise in Python with dynamic modules and package flexibility. Currently pursuing a **Master's** degree in **Computer Science** at the **Universität Paderborn, Germany**.Skilled in Django for database design, authentication, and deployment. Expertise in API integration, Docker, managing asynchronous tasks, and queuing. I develop innovative web apps using the React frontend toolkit. Known for teamwork and communication, I bring a diverse skill set and a collaborative approach.

PROFESSIONAL EXPERIENCE & PROJECTS

DiveBridge- **Feb 2025 –August 2025**
Python/Django/Django REST/SQL *and* ***REACT****. Tools like* ***Docker/AWS (Employment)*** Lahore, Pakistan
(Backend Software Engineer)

- **StudyScavenger:**
  I developed StudyScavenger, a secure clinical research portal with a **HTML5/CSS3/JavaScript/React** frontend and **Django/Django REST** backend **API** endpoints connected via **Axios.** Researchers use **token-protected APIs** to create and manage **SQL-powered** studies, define health-condition eligibility and health-system criteria, and link protocols to live sites. Patients browse, filter, and enroll in trials by condition, system, location, or sponsor within the interface. All services are **Docker**-containerized and deployed on **AWS ECS** for high availability, seamless updates, and elastic scalability.
- **DogWalker:**
  I built a **Docker-containerized Django/Django REST** app backed by a **SQL** database that ingests client and appointment CSVs, uses a three-pass algorithm to assign staff (respecting preferences and 15-min buffers), then auto-optimizes each route via **Google Maps**, exposing both REST endpoints and a custom Admin form for one-click CSV download.
- **Ecommerce Store:**
  Built a containerized e-commerce store with **HTML5/CSS3/JavaScript** and a **React/Axios** frontend, backend using **Django/REST API.** The API handles token-based auth, products, orders, and payments, while the UI manages catalog, cart, and checkout flows. All services—including PostgreSQL—run in Docker for consistent environments, CI/CD, and easy scaling.
- **LawAI:**
  I developed **LawAI**, a dynamic legal-tech platform with **HTML5, CSS3, Bootstrap,** and **JavaScript** on the frontend, and a **Django/Django REST** backend with an **SQL** database powering study creation, secure **token-based authentication**, a commenting system, and a booking workflow for hiring lawyers and seeking legal guidance. **Automation scripts** ingest hearings, judgments, statutes, and scholarly analyses from external legal sites, enriching the case library and ensuring up-to-date legal resources on demand.

TechXelo- **Oct 2023 – Dec 2024**
Python/Selenium/Playwright/Django/Django REST/SQL *and* ***REACT****. Tools like* ***Docker/AWS (Employment).*** Lahore, Pakistan
(Associate Software Engineer)

- **A Meeting and Chatting App with Location Tracking:**
  I developed a meeting and chatting application with a responsive **HTML5/CSS3/JavaScript and Bootstrap/Tailwind** frontend backed by **Django/Django REST and MySQL** for user, role, and message management. Secure **JWT-based** authentication and role-based access control ensure only authorized participants join one-on-one and group conversations, while **Redis Channels and WebSockets** power low-latency text and image delivery. Location tracking is implemented via **MapMyIndia** and **Google Maps Geolocation APIs,**

displaying live geofenced markers on an interactive map and broadcasting updates instantly to all peers. This integrated platform delivers a robust, location-aware communication experience.

- **NearYou:**
  I developed "**Near You**," a chat & dating web app connecting users with service-provider "**buddies**" based on interests and **city proximity**. Built with **HTML5/CSS3/JavaScript, Bootstrap, React, and Django/Django REST,** it uses **Redis Channels/WebSockets** for real-time messaging. The **PostgreSQL** backend stores buddy and user profiles, roles, payments via a gateway, and chat history—opening chat **sessions** upon payment and till dating dates, in the database.
- **Email Verification and Enrichment site**
  I built an Email Validation and Enrichment platform using **HTML5/CSS3/JavaScript, Bootstrap, Django/Django REST Framework,** and **MySQL**. The system authenticates email **deliverability** and accuracy via **third-party APIs**, then enriches each address by aggregating linked social, professional, and demographic profiles. Users purchase credits and subscription plans through an integrated payment gateway; each lookup deducts from their credit balance.
- **Automation Scripts:**
  OpenPhone Automation: Developed **Selenium** scripts to automate calls, messaging, IVR navigation, and activity logging with retry mechanisms.
  Auto-Trading Script: Engineered a **Selenium-driven** script for order execution, portfolio monitoring, and real-time market data capture.
  NBA Data Pipeline: Built a data pipeline using **Selenium, Playwright**, and BeautifulSoup to aggregate, normalize, and store NBA statistics.
  Furniture Catalog Automation: Implemented **Playwright** and **BeautifulSoup** scripts to extract and bulk-load furniture product data, images, and pricing.

Enigmatix-
Python/Django/Django REST Developer *and* ***SQL*** *and* ***Python Libraries (Internship).*** **Oct 2022 – May 2023**
Bahawalpur, Pakistan

- **Multi-Brand Data Dynamic website:**
  Developed a **multi-brand** marketplace web app with **HTML/CSS/JS, Bootstrap/Tailwind, Django/Django REST**, **SQLite**, and **Docker**. Each vendor has an independent **storefront** with **custom catalogs**, **pricing**, and **order** management, while the core platform manages **authentication**, **unified cart**, **payments**, and **analytics**. **Docker** ensures **isolated** store services, easy scaling, and **zero-downtime** updates.
- **Blood and Organ Donation Site:**
  I built a responsive web app to promote **blood and organ** donation using **Django/Django REST Framework**, **MySQL, Bootstrap, HTML5/CSS3**, and **JavaScript** with secure role-based **authentication**. It offers **real-time donor/recipient** search by city and area, **auto-updates** availability, and shows contact details with **location sharing**. Upon matching, it marks donations as "**confirmed**" and sends email alerts to both parties.
- Integrated **Python threading** into an existing projects to parallelize **I/O-bound** operations and significantly **speed up processing**.

Codiux- **May 2022 – Jan 2023**
Python/ **NumPy/os/pathlib/** ***(Internship)*** Multan, Pakistan

- **Auto Scrape:**
  Automated extraction pipeline that uses Beautiful Soup to scrape target sites and directly populate my project's database/models with fresh data in real time.
- **Smart CV:**
  Form-driven CV generator: collects inputs and uses **PDFKit** to render **HTML/CSS** into PDF, with Pillow drawing shapes, lines, and text annotations.

SKILLS

Programming Languages

- Python
- JavaScript

Operating Systems

- Linux
- MacOS
- Windows

Databases

- MySQL
- SQLite
- PostgreSQL

Tools and Technologies

- Django
- Django REST/FastAPI
- Selenium/BeautifulSOUP/Playwright
- Websockets/Celery
- Redis/Channels
- Git/GitHub
- GitHub Actions for CI/CD
- Docker
- Vagrant
- AWS(Lambda,S3,EC2*)*
- HTML/CSS
- Bootstrap
- Tailwind
- REACT

EDUCATION

University of Paderborn Germany — **Expected graduation: July 2027**
*Masters of **Computer Science** (in progress)*

The Islamia University Of Bahawalpur — **Graduated: June 2023**
*Bachelor of **Computer Science (GPA: 3.55)***

LANGUAGES

English — **C1(Advanced)**

Deutsch / German — **A1(Beginner)**
